Art Unit: 2813

#### **DETAILED ACTION**

## Election/Restrictions

Applicant's election of claims 19-33 in Paper dated 4/9/04is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Claims 34-35 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected claims, there being no allowable generic or linking claim. Election was made without traverse in Paper dated 4/9/04.

# Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 19-33 are rejected under 35 U.S.C. 102(e) as being anticipated by Tayanaka (\*213).

Art Unit: 2813

19. Tayanaka teaches a method for fabricating a solar cell on a reusable substrate of a semiconductor material comprising the steps of

providing a substrate of a semiconductor material having at least one surface (Fig. 25 (11)); forming at least one porous layer on said surface of said substrate (Fig. 25D (12M)), depositing at least one semiconductor layer on said porous layer (Fig.25D (101)), forming active devices in said semiconductor layer including forming at least one n- type doped region and at least one p-type doped region in said semiconductor layer of each active device, said n-type and p-type regions having an exposed surface (Col.35, lines: 5-15), forming electrical contacts to said active devices including forming metal contacts to the exposed surfaces of said n-type region and said p-type region of said active devices (Fig. 26A (102)), attaching a support to the surface overlying said metal connections (Fig:26C (104)), and non-mechanically detaching said substrate from said semiconductor layer by removing said.

porous layer with a wet chemical etch using said support as an etch mask (Col.9, lines: 55-61 and Col.35, lines: 30-35).

- 20. Tayanaka teaches a method as recited in claim 19, wherein said porous layer on said surface of said substrate is formed by an electroless etching technique in an aqueous chemical solution (Col.35, lines: 30-35).
- 21. Tayanaka teaches a method as recited in claim 19, wherein said surface of said substrate is textured or structured prior to forming said porous semiconductor layer (Col.2, lines :25-35).

Art Unit: 2813

- 22. Tayanaka teaches a method as recited in claim 19, wherein said support is a flexible sheet material (Col.33, lines: 50-55).
- 23. Tayanaka teaches a method according to claim 19, wherein said support is composed of a plastic or a polymer (Col.7, lines: 5-15).
- 24. Tayanaka teaches a method according to claim 19, wherein said porous layer is a single porous semiconductor layer (Fig. 25D (12M).
- 25. Tayanaka teaches a method as recited in claim 24, wherein said single porous semiconductor layer is formed such that there is a gradient in porosity (Fig.23 and 24).
- 26. Tayanaka teaches a method as recited in claim 24, wherein said porous semiconductor layer is a porous silicon layer, said method further comprising the step of thermally oxidizing said porous silicon layer to thereby convert said porous silicon layer to a porous silicon oxide layer (Col. 10, lines: 54-60).
- 27. Tayanaka teaches a method as recited in claim 26, wherein said substrate is detached from said semiconductor layer by removing said porous silicon oxide layer using a wet chemical etch, said wet chemical etch being selective to said substrate and said semiconductor layer (Col.9, lines: 55-61 and Col.35, lines: 30-35).

Art Unit: 2813

28. Tayanaka teaches a method as recited in claim 19, wherein said metal contacts are formed by screen printing a first metal paste to contact said p-type doped regions and a second metal paste to contact said n-type doped regions (Col.14, lines: 1-5).

- 29. Tayanaka teaches a method according to claim 19, wherein said semiconductor material of said substrate is selected from the group consisting of Si, SiGe, Ge, GaAs (Col. 12, lines: 45-60).
- 30. Tayanaka teaches a method as recited in claim 29, wherein said substrate is doped with either an n- type impurity or a p-type impurity, said substrate having a highly doped surface region whereon said porous layer will be formed (Col.34, lines: 15-20).
- 31 Tayanaka teaches a method according to claim 19, wherein each of said semiconductor layers is either an n-type or a p-type doped layer being composed of a semiconductor material selected from the group consisting of Si, (Col.27, lines: 50-60)
- 32. Tayanaka teaches a method as recited in claim 31, wherein said thin film semiconductor devices are thin film solar cells having a plurality of actively collecting semiconductor layers of different doping types (Col.1, lines: 20-45).
- 33. Tayanaka teaches a method according to claim 19, wherein after detaching said substrate an additional layer is formed on exposed pads of said semiconductor layer, said additional layer

Art Unit: 2813

being used at least as a passivation layer or an anti-reflective coating layer or a back surface reflector layer (Col.14, lines: 1-10).

### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Laura M Schillinger whose telephone number is (571) 272-1697. The examiner can normally be reached on M-T, R-F 7:00-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Carl W Whitehead, Jr. can be reached on (571) 272-1702. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
